

Nominal Ledger

Management information for decision makers

Nominal Ledger is your window on your company's financial status. Want up-to-the-minute data from the Sales Ledger, Purchase Ledger, Invoicing/SOP, Payroll and Cashbook for management information and reports? You can have it. Thus enabled to determine trends in your company's trading performance as they emerge, you can make the decisions to influence them positively.

Flexibility, giving you greater control over your accounts

The Opera II chart of accounts is extremely flexible: create charts to suit the way your business works. These can then be copied to other companies, saving you time and maintaining consistency. Multiple companies can be consolidated into one Nominal Ledger — you can then monitor performance at both company and group level.

Financial reports designed for your business

For management reports there is the flexibility to design your own financial reports, from a 'snapshot' view to as detailed a picture as you like of your company's trading performance.

- Definable financial calendar
- Recurring, Reversing or Retained Journals
- Definable management reports
- Original and revised budgets
- VAT journals
- Nominal consolidation
- Extensive drilldown features to period values, transactions and source documents
- Real-time or batch update from source ledgers
